

RM Transfers — Complete Booking System Flow

End-to-end from website booking through Stripe payment, operator dispatch, driver actions, to post-trip review. Updated May 2026.

Key: Amber arrows = happy path. Red = decline branch. All SMS via ClickSend. Email via Resend. Payments via Stripe Checkout. Data stored in Airtable.
Drivers never see customer PII until admin has dispatched. Operators see the booking on dispatch but with PII redacted until payment is confirmed. All enforced server-side via /api/booking?view=operator|driver.

Booking States, Visibility & SMS Triggers

Every status value the booking can take, who sees it, and what automated messages fire on each transition.

Pending New enquiry from website. n8n webhook created the Airtable record. <i>Visibility: Admin only. Operator + driver: hidden.</i> <i>SMS/Email: SMS to admins (Graham + Roy) with deep link.</i>
Awaiting Confirmation Admin has sent a price quote to the customer via SMS. <i>Visibility: Admin only.</i> <i>SMS/Email: Customer SMS: price + portal link to accept/decline.</i>
Awaiting Payment Customer accepted the quote. Waiting for Stripe payment. <i>Visibility: Admin only. 24h cron nudge if unpaid.</i> <i>SMS/Email: Nudge SMS after 24h (once only, flagged).</i>
Accepted Stripe payment received. Webhook auto-set status + dispatched. <i>Visibility: Admin + Operator (after dispatch). Driver after assignment.</i> <i>SMS/Email: Customer: confirmation SMS + email. Admins: payment alert SMS.</i>
Declined Customer chose not to proceed via the portal. <i>Visibility: Admin Archive tab. Operator + driver: hidden.</i> <i>SMS/Email: Admin SMS: booking declined notification.</i>
Completed Driver tapped Complete Job. Trip finished, awaiting close. <i>Visibility: All portals (admin, operator, driver).</i> <i>SMS/Email: No SMS on this transition.</i>
Archived Driver tapped Close Job. Trustpilot review SMS scheduled 24h later. <i>Visibility: Admin Archive tab. Operator + driver archive.</i> <i>SMS/Email: Scheduled Trustpilot review SMS (9am-6pm window).</i>

Technology Stack & Portals

Infrastructure, integrations, and the four portal views that make up the system.

Frontend & Hosting

- Static HTML + React (JSX) — no build step
- Hosted on Vercel with serverless API routes
- Address autocomplete via OpenStreetMap/Nominatim
- Fixed-fare pricing engine (Car/MPV/8-seat)
- Bank holiday + double-time date awareness

Data Layer (Airtable)

- Bookings table: full lifecycle tracking
- Operators table: name, phone, default driver
- Drivers table: name, phone, operator, vehicle
- Admins table: username/password for portal auth
- All CRUD via Vercel serverless /api/* endpoints

Admin Portal (admin.html)

- Kanban board: Pending/Awaiting/Accepted/Archive
- Set prices, assign operators, dispatch bookings
- Send quote SMS, acknowledge payment, manage all
- Super-admin: manage operators, drivers, stats
- PIN-protected login via /api/login

Driver Portal (driver-portal.html)

- Sees only their assigned jobs
- Action buttons: On Way / Arrived / Complete
- Each action triggers customer SMS automatically
- Return-leg: send pickup location SMS
- Close Job: archives + schedules review invite

Payments (Stripe)

- /api/create-checkout: builds Stripe session
- Promo codes (promotion codes + coupon IDs)
- stripe-webhook: checkout.session.completed
- Auto-sets Status=Accepted, dispatches to operator
- Stores Amount Paid separately from Customer Price

Notifications

- SMS: ClickSend REST API (all automated)
- Email: Resend API (booking confirmations)
- n8n: initial webhook + Airtable record creation
- Vercel Cron: daily nudge for unpaid bookings
- 12+ SMS actions: quote, confirm, remind, review...

Operator Portal (operator.html)

- Sees dispatched bookings only
- Allocates drivers from their own driver list
- PII redacted until paid + dispatched
- Resend confirmation email to customer
- Username/password login via /api/login

Customer Portal (portal.html)

- Unique link per booking (via ?ref=ATL-XXXXXX)
- View trip details, driver info, status
- Accept / decline quote buttons
- Pay via Stripe Checkout button
- PWA: installable to home screen
